

HEALTH, WELLNESS AND SCIENCE PROGRAMS

Recognizing the need for a well-trained, healthcare-focused workforce, The School of Extended Education provides courses and certificate programs for those currently in health and wellness and other science-focused career paths, those interested in entering these fields, and those simply interested in increasing their own knowledge base. Programming is available for academic credit as well as CEUs for professional development. Much of the programming is also approved for continuing education for recertification credits or licensure renewal with Board of Behavioral Sciences, Board of Registered Nurses, and other certifying agencies.
